ABSTRACT:

This module contains LIB\$MOVC3, which makes the VAX MOVC3 instruction available as a callable procedure.

ENVIRONMENT: Runs at any access mode, AST Reentrant

AUTHOR: Steven B. Lionel, CREATION DATE: 28-October-1981

MODIFIED BY:

                                                                                                                                                        (3)
                                                                  .SBTTL LIBSMOVC3 - Execute MOVC3 instruction
                                                          FUNCTIONAL DESCRIPTION:
                                                                  LIB$MOVC3 makes the VAX MOVC3 instruction available as
                                                                  a callable procedure.
                                                                  The source is moved to the destination. The operation is such that overlap of the source and destination does not
                                                                  affect the result.
                                                                  For more information, see the VAX-11 Architecture Handbook.
                                                           CALLING SEQUENCE:
                                                                  status.wlc.v = LIB$MOVC3 (length.rwu.r, source.rz.r, dest.wz.r)
                                                          FORMAL PARAMETERS:
                                00000004
                                                                  length = 4
                                                                                               ; The number of bytes to move from source
                                                                                                to dest. Passed by reference. The maximum
                                                                                              : value is 65535.
